Sant Julià de Ramis (Girona – Spain), March 2013

TEST CERTIFICATE

Indústries Mecánicas Lago S.A.U., manufacturer of all pumps series NIAGARA from 0,5 CV to 3 CV, declares that:

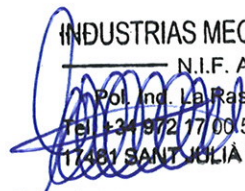

All pumps series NIAGARA, before being packed for shipment, go through a real operation test in our factory, with water circulation. During the test, several variations are carried out in the return conduct so that each pump works at different points of pressure, among them: return with total opening (maximum flow), total closing (maximum pressure) and working point (approx 10m head)

During the test, the following checks are being done:

- Lack of water leaks in the different possible areas.
- Delivery of a correct hydraulic flow according to model.
- Correct electrical consumption of the motor according to model.
- Lack of abnormal noises.

All that guarantees that the pump functions correctly once it is manufactured.
